

INDUSTRIAL PARTITIONING

Easily installed and demounted, industrial partitioning is used to create offices, storage areas, protective screening etc for a variety of applications in factories, workshops or warehouses.

Be it single or double skin it is extremely strong and adaptable and the use of formed sections has allowed for facings to be flush mounted thereby contributing to Health and Safety.

Sections and Tubes has been supplying profiles to this industry for many years and has developed a suite of sections specifically for demountable industrial steel partitioning systems.

These include Floor channels, Post sections, Cover channels, Top Capping, Glazing Beads, and Door Posts.

These sections are normally manufactured from CR4 and HRPO materials, but certain sections have been rolled from Organasol coated material when required (subject to raw material availability)

- Floor channel • Post sections • Cover channel • Top capping
- Glazing bead • Door posts • Development of Bespoke Sections

Your particular application may call for the development of a bespoke product and Sections and Tubes can call on a wealth of experience to achieve a satisfactory conclusion further enhancing the Company's reputation for service, quality and technical back up.

If you'd like to know more or you have a particular project which you would like to discuss call today on 0121 553 2721 or email admin@sectionsandtubes.co.uk
