

STORAGE & RACKING

With commercial and industrial space costs at a premium the demand for its cost effective management has never been greater. Consequently high quality and flexible storage and racking systems are of paramount importance in optimising space.

Sections and Tubes has a long history of working in conjunction with customers in the storage and racking industry, developing bespoke and standard profiles, which lend themselves to section rolling.

These sections are produced from HRPO, pre-galvanised, and other materials requiring greater load bearing characteristics where specified, in various gauges and can be supplied pierced or plain as required.

Typical sections rolled for the storage and racking industry include the following

- Uprights • Crossbeams • Rebate or stepped beams
- Bracing bars • British standard angle

Your particular application may call for the development of a bespoke product and Sections and Tubes can call on a wealth of experience to achieve a satisfactory conclusion further enhancing the Company's reputation for service, quality and technical back up.

If you'd like to know more or you have a particular project which you would like to discuss call today on 0121 553 2721 or email on admin@sectionsandtubes.co.uk
